

ADOIT 12.0 Walkthrough - Free Update Training Webinar

A product of the BOC Management Office

Points to Cover ADOIT 12.0 Training

Training High-Level Overview

Agenda Topics

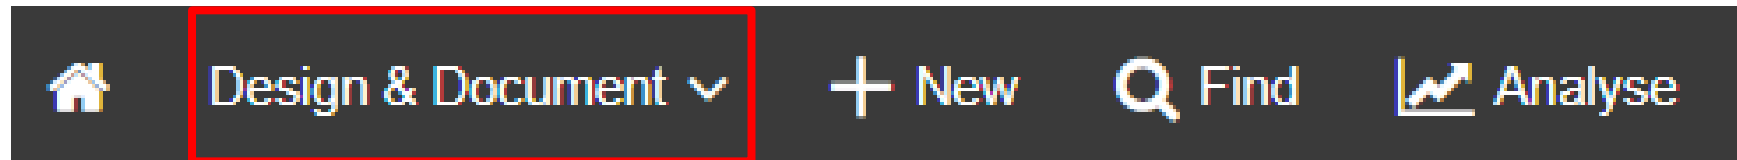

- User Interface Redesign
- Generate URLs for Saved Queries
- “Influence Matrix
- Grouping Elements Visualised in Insights Dashboards
- “My Objects” Dashboard Improvements

Training Topics – Overview

User Interface Redesign

- **Redesigned Scenarios:** ADOIT is organised into a number of scenarios that accommodate different stakeholders' needs. These scenarios have been significantly redesigned.
- **Changes in Scenario Selection:** The scenario selection page has been removed. Instead, your scenario is automatically set at logon. As you work, you can select the desired scenario from the dropdown menu in the global toolbar.

- **Navigation Bar Removed:** The **navigation bar** on the left side of the program window has been retired. Access to many features of ADOIT is now available through the use cases **New**, **Find** and **Analyse**.

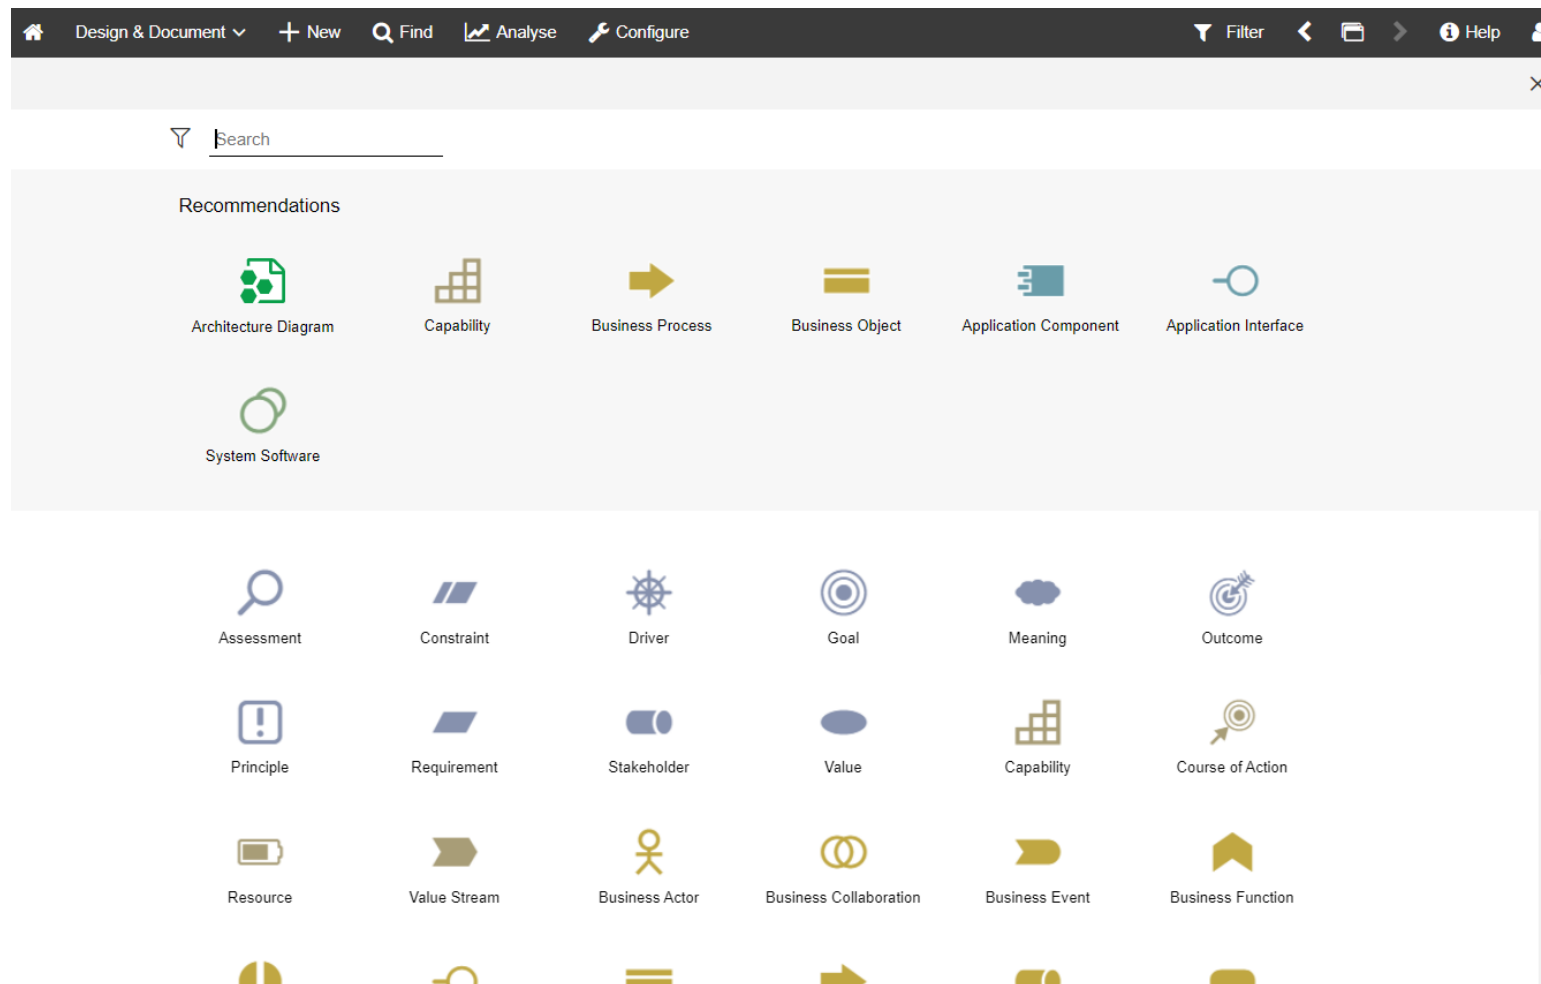

Training Topics – Overview

User Interface Redesign

The biggest changes in the new user interface concern the three new use cases **New**, **Find** and **Analyse**

- **New**: Create new models and objects. Filter by topic so that only a limited selection of options is displayed.

Training Topics – Overview

User Interface Redesign

- **Find:** Open the Explorer and the search function in ADOIT. Multiple search and filtering options help you quickly find the artefact you are looking for.

The screenshot shows the ADOIT software interface with the search function open. The search bar contains the text 'Partner'. The results are displayed in a table with columns for Type, Name, Model, and Description. The table lists 18 results, including 'Expansion of Associated Partner...', 'Inadequate key management...', 'Replacement of Partner Syst...', 'Standardisation Partner Soft...', 'Business Partner Management', 'External Partner', 'Partner Management', 'Business Partner', 'Partner', 'Partner Address', 'SP:08.BAI03 Manage Solutio...', 'Windows 10 Quick Guide (EN)', 'Archive (ARC)', 'Business Partner', 'Change Partner', 'Confirm Partner Data Change', 'Create Partner', and 'Legitimation Management S...'. The search results are filtered to show 38 total results.

Training Topics – Overview

User Interface Redesign

- **Analyse:** Open the Reporting Board and run predefined search queries or generate views and reports. Open various scenario-specific dashboards.

The screenshot displays a software interface with a dark top navigation bar containing icons for 'Design & Document', '+ New', 'Find', 'Analyse', and 'Configure'. On the right side of the bar are 'Filter', navigation arrows, and 'Help'. Below the bar, a 'Filter...' input field is visible. The main area is divided into a left-hand navigation tree and a right-hand report grid.

Navigation Tree (Left):

Training Topics – Overview

User Interface Redesign

- **Changes in the Graphical Editor:** The **drawing border** has been removed because users found it annoying. Instead, the model size now automatically adjusts to the model content. Also, the **model header** now only shows the name and no further information, such as the description of the model.

Training Topics – Overview

Generate URLs for Saved Queries

- You may now generate a URL for a search query. When you share this URL with a colleague and they click it, the saved query is run, and the result is displayed.

Saved queries

Filter... [Search icon] [Refresh icon]

Name ↓	Description	Date	Owner	Public		
My Application Components	This search query shows all Application Compone...	01.04.2020	Arch Archi (arch)	<input checked="" type="checkbox"/>		
Expiring Technologies	This search query shows all System Software that...	01.04.2020	Arch Archi (arch)	<input type="checkbox"/>		
Application Components wi...	This search query shows all Application Compone...	01.04.2020	Arch Archi (arch)	<input type="checkbox"/>		

Share Execute Close

- If the search query is private, it will be published (= become visible to all users) when you generate a URL for it.

Training Topics – Overview

Metamodel Profile Configurator

- The metamodel profile configurator allows methodology managers to choose from a set of predefined metamodel profiles. These profiles reduce the number of available metamodel elements and can be directly applied to different stakeholders.

Choose the profile you want to work with

- ADOIT for ArchiMate Champions**
Do you want to take a holistic view of your company and already have a lot of practice with ArchiMate? Then choose this profile and use the complete ArchiMate framework with over 60 object types and 11 relationships. [! Learn more](#)
- ADOIT for Fans of a Lean Architecture**
Do you want to take a holistic view of your company and have little or no experience with ArchiMate? Then select this profile and use a subset of the ArchiMate framework selected by experts and based on best practices. [! Learn more](#)
- ADOIT for Portfolio Specialists**
Do you want to model a specific layer of your company in ADOIT and use the right set of object types and relationships? Then use ADOIT for Portfolio Specialists and select the appropriate profile. [! Learn more](#)

Training Topics – Overview

Influence Matrix

- The new Influence Matrix shows the strength of *Influence* relationships between *Principles* and other elements. The strength can be set via the *Strength* attribute of the *Influence* relation.

	! Principle A	! Principle B	! Principle C
▲ Application Component A	+	No entry	No entry
■ Business Object A	++	++	--
○ System Software A	--	-	No entry

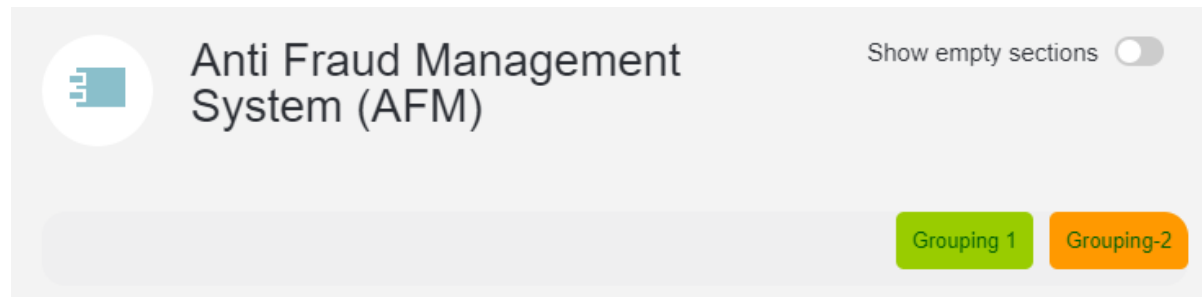

- To show the special Influence Matrix representation with coloured values and matching symbols, click the *Change visualisation* button, and then select *Assessment*.

Training Topics – Overview

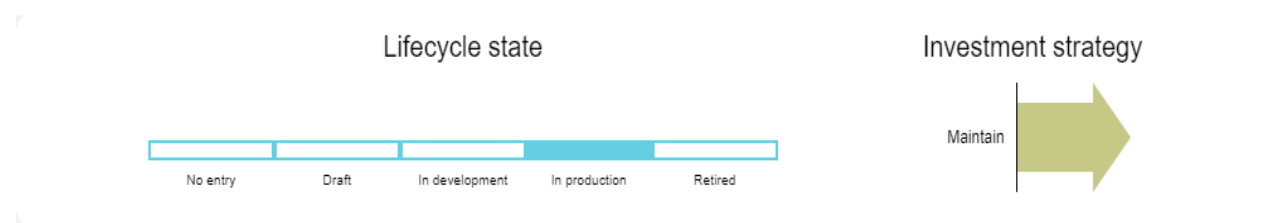

Grouping Elements Visualised in Insights Dashboards

- In the header of all Insights Dashboards, ADOIT 12.0 shows you tags for the *Grouping* elements that aggregate the element you are interested in. The tag colour can be set via the *Tag colour* attribute of the *Groupings*.

Application Component Insights Improvements

- The representation of the lifecycle state and the investment strategy has been improved, using larger titles and larger graphics to display the attribute values.

Training Topics – Overview

Grouping Elements Visualised in Insights Dashboards

- **Grouping: Tag Colour Header:** The graphical representation of the *Grouping* element has been extended. The *Tag colour* attribute is now displayed as part of the header.

- **Realisation: Specialisation Attribute:** The attribute *Specialisation* has been added to the Notebook of the *Realization* relation (in the chapter “General Information”):

Specialisation:

Decommissioned	▼

Training Topics – Overview

“My Objects” Dashboard Improvements

- The "My Objects" dashboard has been improved to provide more detail:
- The widget filter was removed. Now, all elements directly assigned to you AND all elements assigned to your *Business Actors* are displayed simultaneously.
- The RACI columns have been merged into one.
- The new "Affiliation" column shows the *User* or *Business Actor* that the objects are assigned to.
- The new "Grouping" column shows all *Grouping* elements that aggregate your objects.
